

# BREAST PHANTOM

## Product Guidelines

→ Designed for every surgical operation, such as **Tumor resection** and **Mastopexy procedures**.

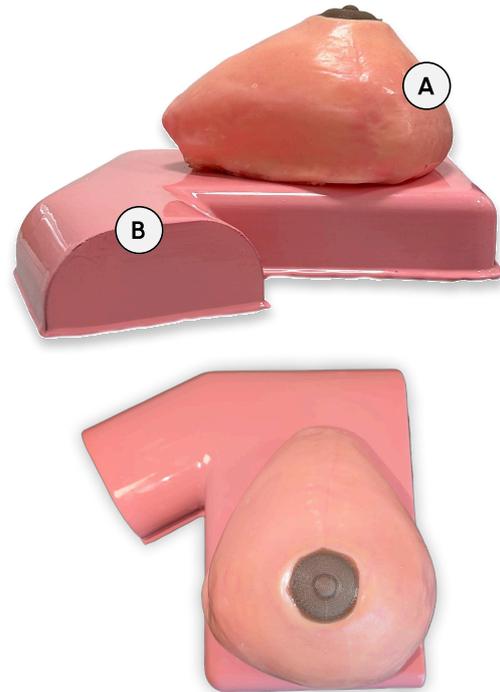

## DESCRIPTION

The product includes:

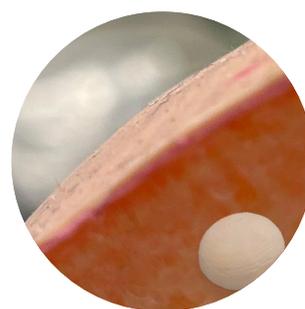

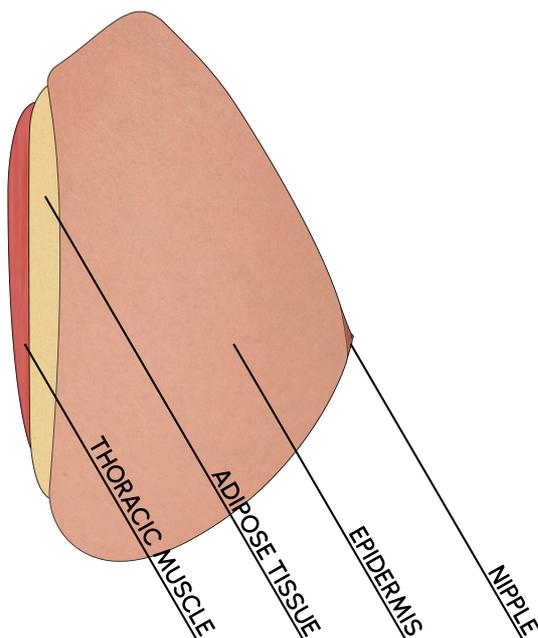

- (A) **pathological breast** replica;
- (B) **support base** designed to replicate the anatomical footprint.

This **pathological breast anatomical model** is designed to provide a **high-fidelity surgical training** experience.

Manufactured entirely from a variety of **silicones**, specifically selected to best suit the requirements of each layer, the phantom accurately replicates the **resistance, elasticity, and tactile feedback** of real biological tissues

## ANATOMICAL COMPOSITION

## SKIN LAYERS

- Epidermis 0.40mm
- Dermis 0.46mm
- Adipose Tissue
- Solid Tumor (made of 3D-printed PLA)

## WARNINGS AND SAFETY

- **Storage:** Store away from direct sunlight (UV rays) and heat sources to prevent deformation or discoloration.
- **Intended Use:** This product is intended exclusively for educational and medical simulation purposes.
